

Command Messenger now available on Solaris 10 11/06

Support includes SPARC and x86/x64 platforms

Austin, Texas – April 9, 2007 – Media Sourcing, the leading provider of secure, assured digital delivery, today announced the support for its Command Messenger client software and associated utilities on Sun's Solaris 10 11/06 operating system. Media Sourcing will maintain support for its existing customers who have Solaris 8 and 9 installations, continuing to parallel Sun's Solaris support roadmap.

Media Sourcing provides a digital parcel delivery system with multiple layers of security to protect confidentiality, provide surety of identification (non-repudiation) and allow business class prioritization, all from an easy to understand end-user interface. These solutions also act as a secure, assured delivery layer that can be integrated into existing applications or green-field Services Oriented Architecture (SOA) applications. This provides HIPAA compliant solutions to the healthcare industry, "digital chain of custody" solutions to the eDiscovery / legal industry and solutions to track and secure confidential data and documents for all industries.

Licensed users can download the supported versions from www.datamessenger.net, Media Sourcing's support and reporting portal.

About Media Sourcing

Media Sourcing offers a high-performance suite of commercial strength data content distribution solutions to solve costly business transaction problems of moving data and documents with security and assurance. Providing 'Security without the Pain', these practical solutions (Data Messenger™, Command Messenger™, Secure Replicator, Digital Hub) provide secure, reliable, cost-efficient and timely delivery with easy to use and simple to integrate solutions that reduce delivery costs and cycle time while improving automation. Media Sourcing is a Sun Partner, and it's products are Java Powered.
