

Authentication and Authorization System

ADD ROLES

Build roles using standard and familiar Active Directory hierarchy definitions like "uid" (user id), "o" (organization) and "ou" (organization unit).

ADD PERMISSIONS

Each role can be authorized for a choice of different permissions levels.

TOKENIZED ACCESS TO RESOURCES

Provides tokenized access across multiple apps, removing the need to login separately to each app.

AUTHORIZE PARTNERS BY EMAIL DOMAIN (NEW for VERSION 3!)

Control access to authorized apps by partner with registration

BLOCKCHAIN IDENTITY INTEGRATION (NEW for VERSION 3!)

Authorize users by Blockstack ID, with additional blockchain identity solutions added soon.

UPDATED USER INTERFACE (NEW for VERSION 3!)

Authentication and authorization is an absolute requirement for today's business but this seemingly complex task does not have to be hard. With Media Sourcery's Authentication and Authorization System mapping the roles that require access to a particular resource is easy and intuitive. Logging of changes is visible right from the same web app.

- Integrates with Active Directory, LDAP and other directory services.
- Provides programmatic access via RESTful web service.
- Intuitive web console interface for configuration and logging.
- Provides list of events related to authentication and authorization.

Updated Admin Console

RESOURCES

Resources can be defined by type, name URI and the URL to which to redirect the user of that resource. Resources are identified by a user defined unique client ID and a friendly name.

SYSTEM INTEGRATION

Media Sourcery also provides system integration services to integrate this product with your core line of business systems, messaging systems and other customizations.

SYSTEM REQUIREMENTS

Auth Service runs best in the cloud but can be installed at your premise. The product works standalone or in tandem with our flagship Workflow As A Service product.

For more information on any of our products or services please visit us on the Web at:

Solution Features and Benefits

Services

- Unique application ID
- Can define authorization for application or API
- Friendly name for identification
- Defined by type, name URI and URL to be used for re-direction

Roles

- Can be internal users, external directories such as Active Directory, email users or blockchain IDs
- External users defined by standard Active Directory hierarchy definitions. For example, "uid=admin, o=authsvc"

Permissions

- Permission holder can be user, group or service
- Flexible permission types

Events

- Audit Trail of all console and authorization activities
- Displays list of auth service events by user and task

Integration

- Active Directory
 - Seamlessly integrates with Microsoft's Active Directory
- Blockchain
 - Define decentralized IDs such as Blockstack and authorize for applications
- Email Domains
 - Allow authorization for partner email domains
- Other Directories
 - Can utilize Media Sourcery's built-in directory
